TERMplus Manager in new .NET-version

TERMplus Manager is a new version of the well-known program Termplus, now in a .NET-version. It is thus operational in several IT-platforms and it has a new incredibly user-friendly interface.

TERMplus Manager is the optimum solution for enterprises and translators wishing to develop and quality assure language knowledge in a database. Likewise, it is the solution if there is a need for quick access to translation of technical terms in special registers. TERMplus Manager can be tailored to suit the needs of the individual enterprise or translator.

TERMplus Manager was developed by professional language experts and programmers and is available with or without terminological glossaries covering specific areas.

With the enterprise's documentation as point of departure, the enterprise in question builds up a term base in TERMplus Manager. This term base supports the enterprise's specific language knowledge in a user-friendly and consistent way. Thus it becomes possible for all staff members to find and re-use current and precise technical terms from special registers in relevant languages. Through the description of the technical terms in TERMplus Manager, the enterprise's knowledge is stored and made available to all staff members.

As simple as possible – as sophisticated as necessary

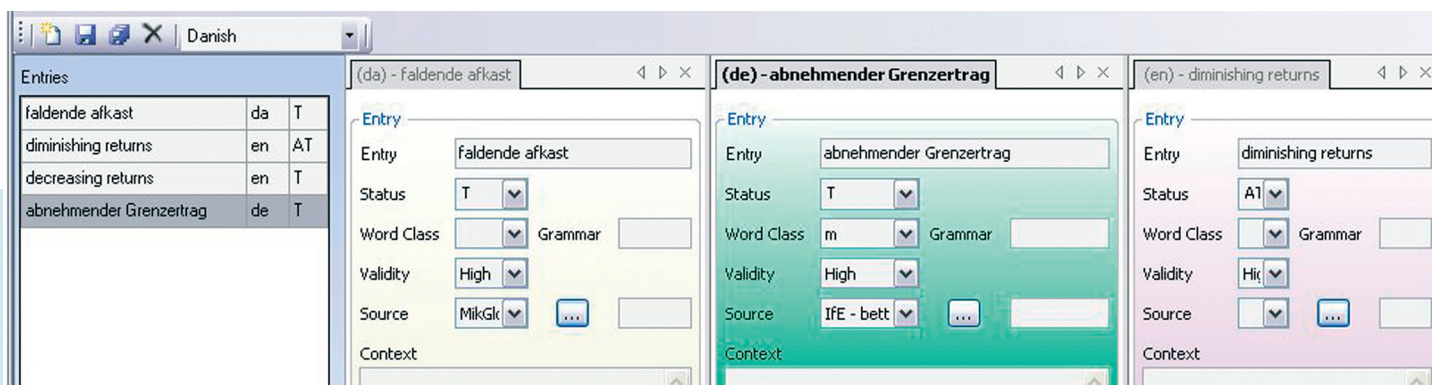

Entry and search are easily integrated into general translation and technical writing jobs. By clicking, it is possible from Word both to search for and enter terms in TERMplus Manager. Exactly the same is possible in the translation process by means of the translation memory Wordfast. When translating in Wordfast, the translator has access to the terms available in TERMplus Manager.

An SL-search for a term results in a TL-translation proposal. The search also produces a collective description of the term pair which, apart from the most important information on the term pair, also comprises status information on terms and general, administrative information on both languages covered by the search.

It is possible to enter graphics, drawings, pdf-files or sound files into the program and thus further describe every single technical term in the term bank.

The TERMplus Manager standard edition offers the possibility of working with Danish, English, German, French, Swedish, Norwegian, Finnish, Spanish, Italian and Russian, but other languages can be added according to needs.
